📋 Key Features by Module

Frontend (React)

- **Components:** Reusable UI components for cards, dashboard, sliders
- **Pages:** Different application pages (Home, Booking, Profile, etc.)
- **Authentication:** Login, Signup, Email verification, Worker form
- **Services:** API communication layer
- **Context:** State management
- **Utils:** Helper functions

Backend (Node.js/Express)

- **Controllers:** Handle business logic for admin, auth, contact, and workers
- **Models:** MongoDB/Database schemas (Users, Workers, Requests)
- **Routes:** RESTful API endpoints
- **Middleware:** Authentication, validation, email services
- **Config:** Database configuration and setup

Database Models

1. **User Model** - User information and authentication
 2. **Worker Model** - Worker profiles and details
 3. **Request Model** - Booking/service requests
-

Project Flow

```
graph TD
    A[User Request] --> B[Routes (Frontend/Backend)]
    B --> C[Controllers (Business Logic)]
    C --> D[Models (Database Operations)]
    D --> E[Middleware (Validation, Auth, Email)]
    E --> F[Response to Client]
```

Getting Started

Frontend

```
cd client/worker-booking-front
npm install
npm run dev
```

Backend

```
cd server
npm install
npm run dev # or nodemon server.js
```

Technologies Used

- **Frontend:** React, Vite, ESLint
 - **Backend:** Node.js, Express
 - **Database:** MongoDB (Models structure suggests)
 - **Email:** Nodemailer (Email.js, Email.config.js)
 - **Authentication:** JWT (auth.js, adminAuth.js)
-
